

Public-network checklist

- 1 Remote public name resolves to the remote public IP.
- 2 TCP 4369 is reachable: EPMD discovers the node.
- 3 TCP 5000 is reachable: the actual distribution connection opens.
- 4 Both sides use the same cookie.
- 5 From the local node:

```
Node.ping(:"cthulu@REMOTE_PUBLIC_NAME")  
# => :pong
```

Same code. Different route.
